

Build a Log Cabin

Materials:

- small milk cartons
- brown or green construction paper
- twigs
- glue
- tape

Directions:

1. Have students collect small milk cartons and twigs. Rinse and dry milk cartons.
2. Give each student a milk carton.
3. Tape the opening of the milk carton shut.
4. Use glue to attach the twigs to the sides of the milk carton. Do one side at a time, letting each dry before beginning another.

5. After gluing twigs to all four sides, have students cut construction paper to fit like a roof over the top of the milk carton.
6. If brown paper is being used, draw shingles or wood planks on it. If green paper is being used, draw blades of grass on it to make it look like sod.
7. Glue the decorated construction paper to the top of the milk carton to complete the cabin.
